

Remote Access Solutions

Solution Overview

Businesses cannot afford to stop trading when hit by natural disasters, or pandemics, so contingency planning is essential to ensure business continuity. COVID-19 has brought on a global economic recession. For most businesses, continuity is the only option for survival. Our Remote Access Solutions present you with a secure and scalable solution.

Ensign's Remote Access Solution helps IT departments address the daunting task of supporting a workforce that's distributed/mobile and requires access to the same resources as corporate users. By providing a versatile remote networking solution, IT can securely extend the corporate enterprise network at lower cost and massive scale to easily overcome the complexity that makes traditional remote networking options poorly suited for wide-scale business continuity applications. On top of that, multiple failover options ensure that remote sites remain active in case of primary service disruption

Secure Versatility

Using the same security as Mobility Controllers in larger branches, the versatile Remote Access Points (RAPs) create a secure SSL / IP-Sec VPN connection back to a Mobility Controller over any wide-area transport, including 4G cellular, residential DSL, and cable networks with plug- and-play simplicity.

Management Simplicity

Using Aruba Central management platform, IT network managers can centrally manage and monitor the entire distributed network, suitable for locations with no dedicated IT onsite, or under resourced IT teams.

Ensign will pre-configure your RAPs and ship to your offices, so your IT team can bring remote users onto the network with **zero-touch** provisioning.

Just like Mobility Controllers in the branch, RAPs support centralised management of data, voice, and video-applications, including wired voice over IP (VoIP) desk phones, printers, and other IoT devices.

Auto Patch | Plug & Play

RAP installation is plug-and-play, features built-in diagnostics, and is simple for any employee to power up.

Software updates are automatically installed, eliminating the need to manually upgrade hundreds or thousands of sites.

REQUIREMENTS**

KEY BENEFITS

- **Seamless Access**
Instant access to all apps on the corporate network
- **Always-On Connectivity**
Automatic discovery and failover between DC and remote sites
- **Zero-Touch Provisioning**
Easy-to-install design with zero cost of deployment
- **Wired & Wireless Security**
Role-based policy access and control for each user / device
- **Highly Scalable Solution**
Massively scalable to meet needs of even the largest workforce
- **Regulatory Compliance**
Built-in reporting for auditing of compliance and regulations
- **Central Management**
The Management Platform provides a single interface from to manage all remote users
