

Security Services

Service Overview

Protecting your business by keeping your people, your data and your assets safe and secure.

In order to mitigate network risk and potential vulnerabilities, knowing which users and which devices are connected to you network is a business-critical action. World leading cybersecurity researcher 'Cybersecurity Ventures' estimate that cybercrime will cost businesses £4.6billion by 2021, with many businesses struggling to recover from cyberattacks.

The need to secure your business and its assets has never been more important, with continuous increases in the aggression and complexity of security breaches, from phishing and spamming through to more sinister attacks such as ransomware, viruses, denial of service and data leakage.

ENSIGN CAN HELP

Here at Ensign our teams of experienced technology professionals understand network security and the many types of vulnerabilities you could be exposed to. We will work closely with your teams and present options to meet your business needs, from security at the perimeter of your network all the way through to security at the edge, including the many user end points connecting to your network from within.

Our security experts are vastly experienced over many years in understanding the most secure solutions for every environment and will ensure we design, implement and manage your network security solution; mitigating the risk of network breaches and unwanted costly downtime and loss of productivity.
