

SOLUTION OVERVIEW

ACCESS POINTS

Wireless expertise from Ensign Communications

Ensign have been leaders in the design, deployment, security, and management of wireless connectivity solutions for over 30 years. Working with several of the industry's best of breed vendor partners, we bring innovation and expertise to our clients, ensuring we create customised solutions designed to meet both your technical requirements, and importantly your budgetary requirements.

Our Wireless LAN connectivity options will present you with high performance, high capacity networking. With the rapid increase of remote workers, smart devices and mobile applications, your business continuity will likely be dependent upon your wireless network, and its reliability.

The expectations users are placing on your network requires solutions capable of providing the coverage, capacity, mobility, security, and redundancy levels needed to keep your business fully operational - at all times.

Our solutions will ensure your business can facilitate superior voice, data, video, and location-based services to your network users, meaning more collaborative working and a more productive workforce.

ACCESS POINTS

An integral part of any professional wireless network, we provide enterprise-grade wireless access points providing your businesses robust connectivity, security, and resilience. We are strategically aligned with the market-leaders in wireless LAN and wireless access point technology, we ensure optimum performance of our client networks.

LAN CONTROLLERS

Wireless LAN Controllers remain a core pillar of enterprise-grade networks. Our solutions act as the central point for multiple access point deployments, offering your businesses a vast range of functionalities through which to manage the performance and usage of your network.

REMOTE ACCESS POINTS

Remote Access Points enable business continuity when seamless and secure remote connectivity to the corporate network is essential. Simple plug and play technology, with RAP's pre-configured before they arrive at your premises, and without the challenges and frustrations many VPN connections will present. You can guarantee your business continuity with our 'plus and play' Remote Access Point solutions.

POINT TO POINT

Our Point to Point solutions are best used when a fixed connection isn't practical nor possible. Prevalent within the hospitality, education, and industrial sectors, where users are often high in density and require the freedom to move around the site or campus without a loss of connection or quality of service.

To discuss your specific requirements, contact a member of the Ensign team and we will work closely with your business to design a solution that's right for you – 03330 150 250
